

CODS – T226

Problem statement:

REDUCE THE AMOUNT OF WASTE PRODUCED(so that waste doesn't ever reach the seas)

Abstract:

The major goal of the project is to reduce the waste produced.

The waste produced in the factories, bad sewer systems etc., are a mess, and they are the first places that need the fixes. We also need to take serious actions against wrong doers. Also the wastes from the factories need to be treated. We could also take the waste and mass-smelt it and use it for recycling purposes.
